

Attorney Docket No. 051480-5024  
Application No. 09/582,258  
Page 4 of 9

**IN THE ABSTRACT OF THE DISCLOSURE**

Please amend page 11, lines 3-8, as follows:

$\beta^6$  -- A device for controlling an electromechanical regulator, including a controller (3a) that controls the current through a coil (113) and which, for that purpose, generates control signals for a power regulator (5a). The control signals are determined with the coil (113) operating in the free-running operating state. The control signals depend, during the movement of the armature, on the current and the time differential of the current through the coil (113). --.
